Enabling LEAN on SAP®

Our Lean Implementation Services

The document is confidential to Lean Axis Inc.. Neither the presentation topics, the screen images, graphics, ideas, nor any part of this document may be copied or reproduced in any form or by any means or translated into another language, without the prior consent of Lean Axis, Inc.

Goals

A textbook Lean implementation can be quite daunting—value stream mapping, intense training and implementation, radical changes in processes and company culture. But you don't have to do all that to take advantage of Lean thinking and gain Lean benefits. All it takes is openness to new ideas, trust in the knowledge and experience of the workers, and a willingness to make changes. You can adopt Lean practices incrementally and continuously in a gradual, extended journey toward improvement.

Our LEAN implementation services address the following key objectives:

1. Help organizations realize business performance goals set forth during LEAN roadmap planning and create sustainable distinctive capabilities that differentiate them over the competition.
2. Analyze, Design, Architect and Implement an end-to-end solution enabled by SAP® suite of LEAN solutions that supports visual manual LEAN systems and makes use of technological advances that make them visual and scalable, globally.
3. Provide highly skilled multi-functional resources with LEAN business experience, systems integration experience, and SAP® implementation experience, and deep understanding of your industry to help you tailor systems to meet precise business needs.

Expertise

SAP has added a complete suite of solutions for LEAN manufacturers that address their unique requirements. Some of these are:

- a. SAP® LPO (Lean Planning Operations): Used for planning in LEAN environment.
- b. SAP® BusinessObjects Profitability & Cost Management: Used for LEAN accounting.
- c. SAP® MII (Manufacturing Integration & Intelligence): Used for managing LEAN dashboards and metrics.
- d. SAP® SRM (Supplier Relationship Management) or SAP® SNC (Supply Network Collaboration): Used for managing supplier and partner relationship proactively.
- e. SAP® Visiprise: Used for manufacturing execution system for collecting data in real time.
- f. SAP® SCM (Supply Chain Management): Used for managing demand and supply network planning.
- g. SAP® ECC (ERP Central Component): Used for managing manufacturing execution and integration with other enterprise resources.

We have expertise at implementing all the above solution components specifically in LEAN environment.

Next steps

You don't have to implement all the components of SAP® LEAN solution at the same time. You don't have to put all your product lines on SAP® LEAN solution at the same time. A well planned vertical or horizontal incremental approach can make your implementation smooth and successful.

From LEAN business strategy to its implementation on SAP®, Lean Axis combines LEAN industry experience with SAP® implementation expertise to create solutions that bring real, tangible business value. We strive to increase business velocity, staying ahead of our client's needs with innovative solutions that deliver a rapid return on investment.

Lean Axis welcomes the opportunity to talk to you more about how we can help you to be more successful with your LEAN initiatives on SAP®. Please contact us at info@LeanXis.com or call us at 408-802-1636.
